

Massachusetts Institute of Technology
Department of Electrical Engineering and Computer Science
6.111 - Introductory Digital Systems Laboratory

Project Information

Introduction

The term project in 6.111 is your opportunity to specify a small digital system. You will design, build, debug, demonstrate, and report on this system. This memorandum sets forth our expectations and requirements for this project and makes a few suggestions which should help to make your project a success.

In order to accomplish all that is expected by the end of the term, it is essential that you *stay on schedule*.

Both the determination of grades and the project time requirements are inherently subjective. Lab 3 provides some guidance to the evaluation of project size and complexity. A reasonable guideline as to size of 6.111 projects is that it not require more than a kit and a proto board per person.

6.111 student projects often become too large because of a desire to effect computations in parallel and at high speed. Data paths are often unnecessarily wide and redundant. It is generally far better to minimize the type and extent of the data paths even though this results in more complicated control circuitry.

Use of microprogrammed sequencers and FSMs implemented with PALs allows implementation of complicated control with a small number of ICs. Please remember that massive data paths that enable computation at speeds far faster than needed do not represent a good design! It is almost always better to spend more time thinking and less time wiring.

Instructions

- 1.** The first step in starting your project is to find a partner with whom you wish to work. Two-person projects are preferred, but three-person projects are permitted. Individual projects must be approved by the lecturer.
- 2.** The second step is to decide what you wish to do. A list of project suggestions appears in this handout. This list may be helpful in this regard since it is compiled from past projects which were successfully completed.
- 3.** The third step is to submit a PROPOSAL ABSTRACT (one for each student) using the attached form. This item and the PROPOSAL which follows are to be prepared jointly with your partner. We will use the proposal abstract to assign project teams to members of

the teaching staff. Those assignments will be posted shortly after the deadline for proposal submission.

4. The fourth step is to write the PROPOSAL. It is comprised of:

1. A description of the project in words, stating what your system is going to do and how you plan to implement it.
2. A block diagram.
3. A set of specifications that define in detail what your system is (in input, output terms) and what tests will be used to prove that it functions properly.
4. A statement of how the project work is to be divided among the partners. The block diagram should be referenced.

The project should be partitioned into two separately testable subsystems. Each subsystem is to be the responsibility of a single partner.

The proposal should be typewritten. Typically, it should be two to five pages in length, single-spaced, plus the block diagram and any figures you may need.

5. The fifth step is the Proposal Conference, which is when the proposal is to be submitted. Each project Proposal must also be presented orally to the Staff so that both you and we understand what it is you are attempting, and whether your basic design approach is sound. Each project group should sign up for a 30 minute session. Sign-up sheets will be posted in the lab in advance of the first day of proposal conferences. Be sure to bring extra copies of your Proposal with you to the presentation so that TA's can follow your talk without your having to draw your block diagram on the chalk-board.

6. The sixth step is to prepare detailed Module Designs and Logic Diagrams for each of the blocks in the block diagram, and have these approved by your project TA at the Block Diagram Conference. This approval is a prerequisite to your adding 6 extra units of 6.905.

You and your project partner(s) are to present your project design to the rest of the class. You are encouraged to use an overhead slide to show the class the block diagram. Do not count on drawing it on the board as there is not enough time for this. The presentation day will be chosen by the teaching staff and communicated to you by email and also posted on the web.

7. The seventh step is to build, debug and test your system. Project CONSTRUCTION may not begin until you have:

1. Completed and handed in all problem sets and assigned lab exercises and,
2. Had your detailed logic diagram approved by your TA.

8. The eighth step is to demonstrate your project to a member of the Staff. It is likely we will want to videotape your presentation.

9. The ninth step is to complete and submit the PROJECT REPORT. Material from the proposal can be used. The report may be prepared jointly:

- The Introduction and Summary sections can be joint efforts of the project team, but
- it must contain separate sections, individually written, describing subsystems for which each partner is responsible. Each section of the report should indicate the responsible author.

See the *Report Guide* handout for general requirements for the Final Project Report.

10. The final step is to turn in your kit and other components. Remove all wires from the socket strips and return the chips to their places in the box.

Schedule

Refer to the on-line syllabus for pertinent due dates. Pertinent milestones are as follows:

Formation of Project Teams	Monday, October 27, 2003
Project Abstracts	Wednesday, October 29, 2003
Proposal Submission and Conferences	Monday, November 3, 2003
Block Diagram Conferences	Wednesday, November 12, 2003
Last Day 6.905 forms signed	Tuesday, November 18, 2003
Last Day to ADD 6.905 (Drop Date)	Wednesday, November 19, 2003
Project Design Presentations	Wednesday, November 19 through Wednesday, November 26, 2003
Project Demonstrations	Monday, December 8, 2003
Video-taping of Project Demonstrations	Tuesday, December 9, 2003
Project Reports due by	5:00 p.m. Wednesday, December 10, 2003

Extra Units for “Large” 6.111 Projects

Most 6.111 students spend more hours per week than warranted by the 12 unit rating. Primarily this is due to large final projects. It is now possible to register for an additional 6 units of credit for 6.111.

Our motivation for enabling the availability of these extra units is two-fold. Foremost is our desire to convince 6.111 students that they need NOT do a project which is bigger and more complicated than ever done in the past. Secondly, recognizing that many students will continue to do ambitious projects, we would like to credit 6.111 students with units appropriate to work expended.

We are concerned that the availability of extra units may be taken as a signal to escalate the size of 6.111 projects. Indeed, if we perceive this to be the result, we may discontinue this procedure. While a large project is not required for the extra units, timely completion of course work is. Before you can register for the extra units, you must have completed all of the labs, submitted your proposal, had your design conference and received clearance to begin construction from your project TA.

Procedures for adding six extra units (as 6.919) are described on an attached page, together with additional information.

Massachusetts Institute of Technology
Department of Electrical Engineering and Computer Science

6.905 SUPPLEMENTAL PROJECT CREDIT
Permission Form for an extra 6 units for 6.111

- Written proposals and logic diagram conferences must be completed by the posted deadlines.
- The deadline for registration for extra units is DROP DATE. Deviations from this deadline will NOT be made.
- An ADD card must be filled out. The **student is responsible for** securing Prof. Troxel's signature, his/her advisor's signature, and delivering the ADD card to the Registrar on or before DROP DATE.
- You must present to Prof. Troxel the following, at least one day before DROP DATE:
 - ADD card for 6 units of 6.905
 - Permission Form (this page) signed by your project TA

NOTE: Prof. Troxel keeps the Permission Form.

- You may, if you wish, leave the filled-in paperwork (listed in the fourth bullet item above) at the Instrument Room desk at the entrance to the 6.111 lab (38-601). After signing your ADD card, Prof. Troxel will leave it there so that you may conveniently get your ADD card and take it to the Registrar.
- Your grade for the extra 6 units will be the same as your 6.111 grade.
- The extra 6 units may not be used to satisfy either the Institute or the departmental lab requirement.

Your Name _____ Course _____

Year _____ Phone _____ Term _____

Term Address: _____ No. of Units = 6

Electronic Mail Address _____

Attach your 6.111 Project Proposal to this Permission Form.

6.111 Instructor's Agreement: The project described above is suitable for 6 Units of 6.905 credit.

TA Signature _____ Date _____
